

Test & Commissioning Engineer, Glasgow, UK

R3 IoT Limited is seeking a talented test & commissioning engineer to join our exciting and ambitious start-up based in the centre of Glasgow.

Started by former senior Clyde Space satellite builders, R3 IoT is leveraging world class satellite technologies to deliver cutting edge IoT capability and connect organisations all around the world. Our applications range from agriculture to renewables, logistics to healthcare.

We are looking for a talented and driven person wanting to make the world more efficient, connected, and sustainable. Come join our exciting and passionate team!

You will:

- Support integration and test of the company's IoT & satellite telecommunications products at our Glasgow office
- Field-commission the technology; putting your mounting, debugging, fixing, and problem-solving skills to the test
- Work closely with customers, partners and suppliers, along with the rest of the R3 team
- Produce technical and user documentation
- Contribute to the company's product development and help define product roadmaps
- Support business-winning activities
- Learn, improve your skills and grow alongside the business

Some requirements:

- Strong communication skills and an ability to interact with customers and suppliers alike
- Experience in electronic testing and usage of standard test equipment
- Knowledge of Linux and the use of the command line
- Willingness to "put the wellies on" and deploy the technology at sites across Scotland and internationally
- Eagerness to assume responsibility, demonstrate independence and leadership
- Desire to work within a small dynamic team
- Hold a driver's license and can work in the UK from January 2020 onwards

Bonus points if:

- You have a good understanding of python and/or embedded technologies
- You have a passion for new technologies
- You're keen to work in a fantastic start-up environment
- You have experience working with telecoms or electronic equipment

We offer:

- Diverse responsibilities with the chance for both field and office work
- A competitive compensation package with opportunities soon to acquire stock options
- A fantastic culture of support with flexible working patterns
- Joining a promising start-up early with the chance to help shape the company as it grows
- Ability to work in solving cutting edge problems and building next generation IoT technology
- Opportunity to challenge yourself and grow in a highly dynamic environment
